WC-565 A/B
WATER CLEAR 65 SHORE A POLYURETHANE ELASTOMER

PRODUCT DESCRIPTION:

WC-565 A/B is a two-part, water clear, colorless aliphatic based polyurethane elastomer. It is recommended for use whenever a flexible, permanently transparent elastomer is required. It is UV light and oxidation resistant and can be easily tinted or pigmented to clean bright colors. WC-565 A/B does not contain MOCA, TDI or MDA. This product exhibits excellent fuel and oil resistance as well.

PHYSICAL PROPERTIES:

Hardness, Shore A ASTM D2240-04e1 ............................................................................................................................................ 65 ± 5
Density, (g/cc) ASTM D792-00 ................................................................................................................................................. 1.02
Tensile Strength, (psi) ASTM D412-98a(2002)e1 ................................................................................................................................ 753
Elongation, (%) ASTM D412-98a(2002)e1 ................................................................................................................................ 200
Tear Strength, (pli) ASTM D62400e1 Die C .................................................................................................................................. 59
Shrinkage, (in/in) linear ASTM D2566- ..................................................................................................................................... 0.004
Dielectric Constant, @ 1 MHz ASTM D150-87 ................................................................................................................................. 3.483
Dissipation Factor, @ 1 MHz ASTM D150-87 .................................................................................................................................. 0.061

(Note: Physical properties obtained from test specimens post cured per recommended procedure.)

HANDLING PROPERTIES:

Mix Ratio (by weight):
Part A ....................................................................................................................... ...................................... 100 parts by weight
Part B ....................................................................................................................... ...................................... 100 parts by weight
Mix Ratio (by volume):
Part A ....................................................................................................................... ....................................... 95 parts by volume
Part B ....................................................................................................................... ..................................... 100 parts by volume
Specific Gravity @ 77°F (25°C):
Part A ....................................................................................................................... ............................................................... 1.07
Part B ....................................................................................................................... ............................................................... 1.02
Viscosity, (cps) @ 77°F (25°C) Brookfield:
Part A ....................................................................................................................... ............................................................. 4,725
Part B ................................................................................................................................................................................. 310
Mixed .................................................................................................................................................................................. 1,100
Color:
Part A ........................................................................................................................................................................... Clear/Colorless
Part B ........................................................................................................................................................................... Hazy/Colorless
Work Time, (100-gram mass) @ 77°F (25°C)..................................................................................................................................... 15 minutes
Gel Time ..................................................................................................................................................................................... 20 minutes
Demold Time @ 77°F (25°C) ....................................................................................................................................................... 6-8 hours
CURE SCHEDULE/HEAT CURING:

Most of the physical properties can be achieved in 5-7 days at ambient temperature, 77°F (25°C). In order to achieve maximum physical properties, a post cure with heat is required. BJB recommends 24 hours at ambient temperature, 77°F (25°C), followed by 16 hours at 160°F (71°C).

If you are using heat to accelerate the demold time, allow the part to cool down to ambient temperature before demolding.

NOTE:

The cure will be inhibited if cast against a tin catalyzed silicone RTV.

STORAGE AND HANDLING:

Store in a cool dry place. Unopened containers will have a shelf life of 6 months from date of shipment when properly stored at room temperatures. Part B may turn hazy or partially freeze below 65°F (18°C) storage. Warming to 80-90°F (27-32°C) will return product to a clear state.

PACKAGING:

Gallon Kits......................................................................................................................................................................... 8 lbs. A, 8 lbs. B
5 Gallon Kits.................................................................................................................................................................. 40 lbs. A, 40 lbs. B
55 Gallon Drum Kits ................................................................................................................................................. 400 lbs. A, 400 lbs. B

SAFETY PRECAUTIONS:

Avoid contact with skin using protective gloves and protective clothing. Repeated or prolonged contact on the skin may cause an allergic reaction. Eye protection is extremely important. Always use approved safety glasses or goggles when handling this product. Use in well-ventilated areas. Avoid breathing vapors. If exposures cannot be kept at a minimum, a respirator may be necessary in addition to ventilation. The use of a positive pressure air supplied respirator is mandatory when airborne isocyanate concentrations are “not known” or exceeds OSHA’S TWA of 0.005 ppm. Air purifying, organic cartridge type respirators are not generally recommended to use when handling this material without implementation of an end of life service program. Observe OSHA regulations for respirator use (29 CFR 1910.134). Employers are responsible for selecting the correct respirator for each situation.

IF CONTACT OCCURS:

Skin: Immediately wash with soap and water. Remove contaminated clothing and launder before reuse. It is not recommended to remove resin from skin with solvents. Solvents only increase contact and dry skin. Seek qualified medical attention if allergic reactions occur.

Eyes: Immediately flush with water for at least 15 minutes. Call a physician.

Ingestion: If swallowed, call a physician immediately. Remove stomach contents by gastric suction or induce vomiting only as directed by medical personnel. Never give anything by mouth to an unconscious person.

Refer to the Material Safety Data Sheet before using this product.
